

Population Dynamics in Indian States

By K. Mahadevan

Mittal Publications, New Delhi, 1989. N.A. Book Condition: New. Viii+325pp Population Dynamics in Indian States focuses on several major determinants of fertility and infant mortality and their inter relationship. This book is divided into three parts on the basis of the above coverage. It is an outcome of a major and first national demographic study covering the important three natural regions of India, viz., North Central and Southern region representedly three states like U.P., A.P. and Kerala. A very large sample of 6500 have been covered under this study. In the analysis of data for the first time the most appropriate conceptual models and the most appropriate conceptual models and theoretical basis using path analysis have been adopted. Several important factors affecting family formation have been considered under Part I. They include; nuptiality, demographic variables, religion and value of children, socio-economic status, breast feeding, family planning, etc. In addition to this general analysis of fertility, a separate focussed analysis of determinants of completed fertility has also been carried out using path analysis technique; the direct and indirect effect of major determinants of fertility, and their order of importance have also been documented. Under Part II also the most appropriate and...

Reviews

It is an awesome publication which i actually have ever read through. it had been written really properly and valuable. I found out this book from my i and dad recommended this pdf to discover.

-- Doyle Schmeler

This book is definitely not simple to begin on studying but quite fun to see. I actually have read and that i am sure that i will gonna read through yet again once again in the foreseeable future. It is extremely difficult to leave it before concluding, once you begin to read the book.
