Excerpt: . . . etc. , all constituting what His calls the law of growth; under extrinsic factors may be listed heat, light, moisture, food, gravitation, osmosis, etc. , composing, according to His, the conditions under which the law of growth operates. In order to understand just what part each one of the various developmental factors or causes plays, there is necessary a most thorough analytical study of development, and an attempt to determine in measurable or quantitative degree just what specific effects each factor produces. Obviously the most reliable way to effect this analysis and this determination of the specific cause and effect relations is to appeal to experiment. But biology has always been looked on as, and until recently has actually been, almost wholly a science of observation. It is now becoming, in part at least, a science of experiment as chemistry and physics have long...
